

Web Scraper for Sitemap XML Files

Description: This program is a command line application that allows the user to scrape URLs, titles, meta descriptions, H1 tag text, and language from webpages listed in a sitemap XML file for a given website. The scraped data is then written to an Excel file.

Usage:

```
website_scraper.exe -w <website-url> -f <excel-file.xlsx>
```

<website-url> = enter the website url

<excel-file.xlsx> = enter the excel file name that you want to generate

How to use:

Open a command prompt or terminal window.

Navigate to the directory containing the "website_scraper.exe" file.

Open windows command prompt and execute the command:

```
website_scraper.exe -w https://dogorfrog.com/ -f DogOrFrog-Data.xlsx
```

The scraped data will be written to the output Excel file in the same directory as the .exe file.
